

## Working student: **HARDWARE HACKER**

**Working Student / Munich (Isartor) / as of now**

### **NELLO**

nello simplifies urban life. We do that by enabling keyless access for residents and service providers. Our hardware, nello one, is an upgrade for your existing intercom unit that you control via the nello app. You get keyless entry into your apartment building and you will never miss a delivery anymore. Service providers can access your hallway and put their deliveries – parcels, groceries or food – right in front of your apartment door. We are a strong TUM / CDTM / INSEAD team of 15 with VC funding of EUR 2.5m (BMW, KPN Ventures and SOSV).

### **YOUR ROLE**

Improving our current hardware platform, analyzing intercom systems and supporting the development of our next version of nello one in close collaboration with our experienced hardware and firmware engineers.

### **YOUR RESPONSIBILITIES**

- Hacking and deciphering of various kinds of intercom systems
- Design, develop and test prototypes in close collaboration with the hardware team

### **YOUR QUALIFICATIONS**

- Enrolled student in 3rd semester or higher, preferably electrical engineering, computer science, mechatronics, communications engineering or information systems
- Good understanding of C/C++ and embedded software programming
- Passion and curiosity for innovative technologies and products
- Self driven, responsible work attitude with clear communication
- Persistence, precision and reliability
- Availability for 8 - 16h per week
- Fluent in English and/or German

### **JOINING US**

- Join an excellent team of 15 entrepreneurs and engineers
- Our nice office is right next to Isartor – free Nespresso, tea, fruits and cookies included
- Kicker league and fun team events
- Salary is 15€/h

**Just send us your CV incl. availability to: [timur@nello.io](mailto:timur@nello.io)**
